To improve quality of life, activities and inclusion, particularly inclusive education, of children with complex and intensive support needs (CISN), we developed and experimented, within the framework of the “Enablin+” European partnership, an interprofessional in-service training. In this chapter, we will report the results of our development and a preliminary experimentation with this new training programme in eight EU countries. During 2015-17, we organized 64 pilot courses and training workshops on 41 topics in eight European countries, followed by a train-the-trainers course. While rooted in modern conceptual frameworks of disability (inclusion, quality of life, rights, capabilities), such training should offer true interprofessional, case-based learning, person- and family centred “case management”, reflective learning about belief systems and practices regarding inclusive activities and participation.

Background

The main goal of the Enablin+ project was to develop an interprofessional in-service training, to improve quality of life, inclusion and a range of activities. In many countries in the world, the needs of children and adolescents with CISN, their caregivers and supporters, are not
